

## Hunterdon Medical Center Laboratory

### Troponin-HS Algorithm

#### How to order Troponin- HS gen 5

#### ED patient for Troponin HS

1ST order: TRTHS (pulse check)

Repeat Troponin: Order TRTWD (pulse check)

If additional repeat Troponin's are requested: Order TRTWD (pulse check)

**Note:** If the lab needs to draw a TRTWD for a repeat, **call** the lab and then "ED" will **push that order** through so that it is visible in Soft lab.

#### Patient still in ED (possible admit)

Troponins can only be ordered as TRTWD until the patient is **admitted in the computer**.

Do not preorder Troponins through QCPR

**Important:** If the patient is still physically in the ED but admitted to EDHD or a unit then place the Troponin orders through QCPR as TRTHS.

#### ED patient now admitted

Place QCPR orders for troponin as TRTHS

#### ALL inpatient Troponins

Place QCPR orders for troponin as TRTHS
